

## WHEEL CENTERBORE

This relates to the centre hole in the wheel that centres the wheel on the hub of the car. Since most wheels are mass produced, they have a large centre bore to accommodate several different vehicles. If this is the case, it is recommended that you use a hub ring. Hub rings are hard plastic or metal ring that fits between the wheel and the vehicle. This centres the wheel perfectly on the hub ensuring that there is no run out when the wheel is installed on to the vehicle. Without hub rings it is possible to get vibrations even if the wheel / tire assembly is perfectly balanced.
